#### Diagnosis:

Situs inversus totalis, cc-TGA, Pulmonary atresia, VSD (borderline commitability), TV hypoplasia (Z-score = -3.7), Right aortic arch, s/p 4mm LMBTS (13.01.2018).

#### Procedure Performed:

Bidirectional Glenn + Transcaval atrial septectomy and takedown of BTS.

**Surgeon:** Dr. Raja Joshi/ Dr. C.R. Siddartha/ Dr. Syed Daud Ali.

**Anaesthetist:** Dr. Reena Joshi/ Dr. Aditya Lamba.

**Cardiologist:** Dr. Neeraj Aggarwal/ Dr. Mridul Agarwal/ Dr. Praneet Lale.

**Ref. Physician:** Self

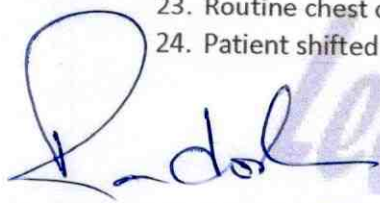

**Comments:** Kabir Singh is well known to our unit since he underwent emergency LMBTS in 13.01.2018. He was on regular follow up since then but he had developed 2 episodes of systemic desaturation. He was planned for Glenn procedure. During re-evaluation, his tricuspid valve showed poor growth (Z-score -3.7) and also due to the borderline routability of VSD, the likelihood of single ventricle palliation was explained to the parents. The risk, complications and the need for further surgery was explained during pre-surgical consent and then taken up for surgery.

#### Findings:

1. Normal sized bilobed thymus.
2. Systemic and pulmonary venous drainage consistent with situs inversus and dextrocardia.
3. Relatively superior placed right atrium.
4. Good sized branch pulmonary arteries.
5. Long blind stump of MPA present + retained for future possible use as tissue for branch PA plasty.
6. Intact atrial septum.
7. Good sized left SVC.
8. Left ward placed IVC present.
9. Patent LMBTS.
10. Rightward placed heart – aorta anterior and behind right side of sternum.

## Steps:

1. Under noninvasive monitoring, as per OR protocol, GA was administered and orotracheal Intubation done using size 4.5 uncuffed ET tube. Left internal jugular venous and right radial arterial lines were placed.
2. Patient positioned, prepped and draped.
3. Midline sternotomy done, both lobes of thymus were excised and pericardium harvested.
4. SVC, LMBTS, RPA and its first order branches dissected.
5. Under systemic heparinisation, Aorta, high SVC and RAA (single stage straight cannula into IVC) cannulation done and CPB commenced without cooling.
6. LMBTS was clipped proximally and ligated distally and divided.
7. LV vented through LA.
8. Aorta cross clamped antegrade cold, blood, root cardioplegia delivered to achieve good diastolic arrest.
9. RAA cannula advanced into the IVC and snugged. SVC transected and radical transcaval atrial septectomy performed via the SVC orifice.
10. Cardiac end of the SVC clamped and sutured. IVC snugger released.
11. Deaired and declamped.
12. Heart picked up in sinus rhythm.
13. RPA incised on its superior aspect at the site of previously inserted BTS. The opening enlarged to match the SVC.
14. Branch pulmonary arteries were sized with Hegar dilators and were adequate. (required 9, accepted 9).
15. SVC stump anastomosed end to side to RPA completing the BD Glenn using 6-0 Prolene.
16. One mediastinal and b/l pleural drains were placed ,
17. 2 A + 2 V pacing wires were placed
18. Weaned off CPB without inotropic support.
19. MUF initiated to extract 700 ml fluid.
20. Heparin reversed and decannulated.
21. Hemostasis secured.
22. Pericardium closed completely and cavity wash was given with warm saline.
23. Routine chest closure done after ensuring correct counts
24. Patient shifted to PCS ICU with stable hemodynamics after extubating in the operating room.
